Dear Adrian

RE: Rules change Alternator Belt

It has been decided that owing to a change in the design of the belts for the alternator drive from Goodyear that it is permissible to install an "idler" gear to help control the belt and stop belts from coming off.

Thus the rules should be changed to read:

17 ELECTRICAL SYSTEM

Alternator Belt drive mechanism may be altered to include a fixed position idler gear.

Could you please send out a MSA Circular for this rule change

Kind Regards

Jannet Wood
